

Phase 2 Project

**Brad Blackwood, Ashley
Eakland, Jalen Charles**

Welcome Home Buyers and Sellers!

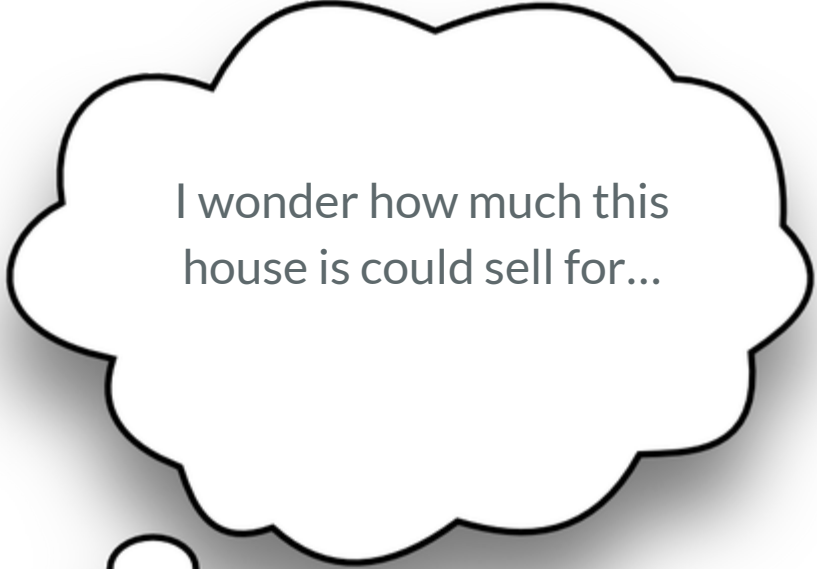

Thanks for joining us to hear about how our user-friendly tool can help you predict the price of a home with just a few key metrics.

Agenda

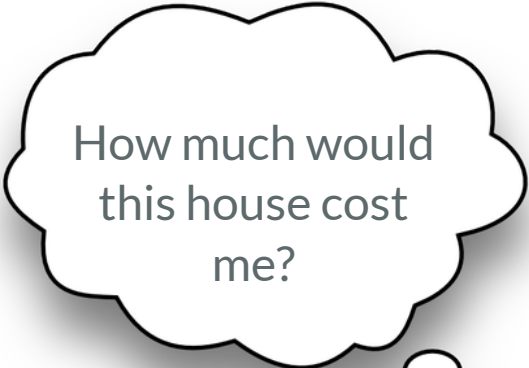

- ❏ Business Understanding
 - ❏ Data Overview
 - ❏ Modeling
 - ❏ Suggestions
 - ❏ Future Research

Have you ever thought to yourself:

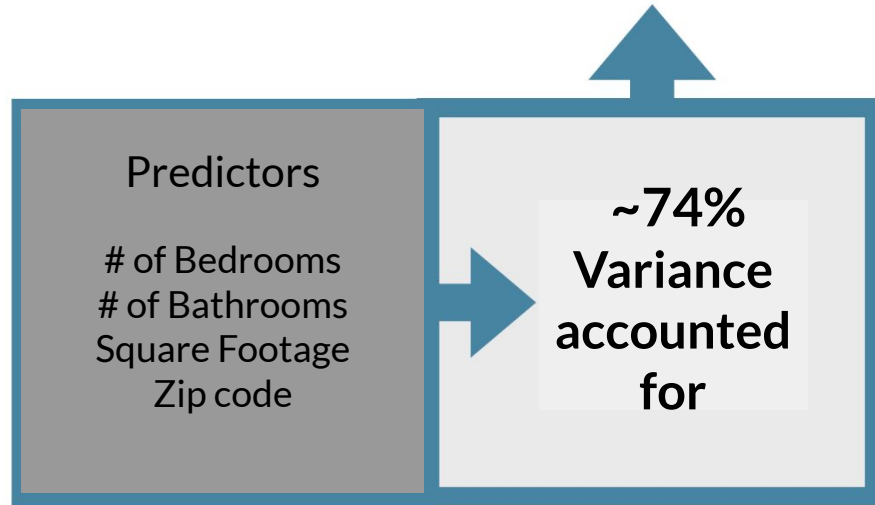

I wonder how much this
house is could sell for...

How much would
this house cost
me?

Our user friendly tool can help!

Bottom Line

Data

King County Home Sales Records

- ❑ May 2014 through May 2015
- ❑ 21,500+ home sales records
- ❑ 70 Unique Zip Codes

Exploring The Data

Target Metric: Price

- ❑ Mean Sale Price: \$540,510
- ❑ Median Sale Price: \$450,000

Square Footage

- ❑ Mean: 2080 ft²
- ❑ Median: 1910 ft²
- ❑ Mode: 1300 ft²

Bedrooms

- ❑ Mean: 3.37
- ❑ Median: 3
- ❑ Mode : 3

Bathrooms

- ❑ Mean: 2.12
- ❑ Median: 2.25
- ❑ Mode: 2.5

**Outliers are omitted from plots for clarity*

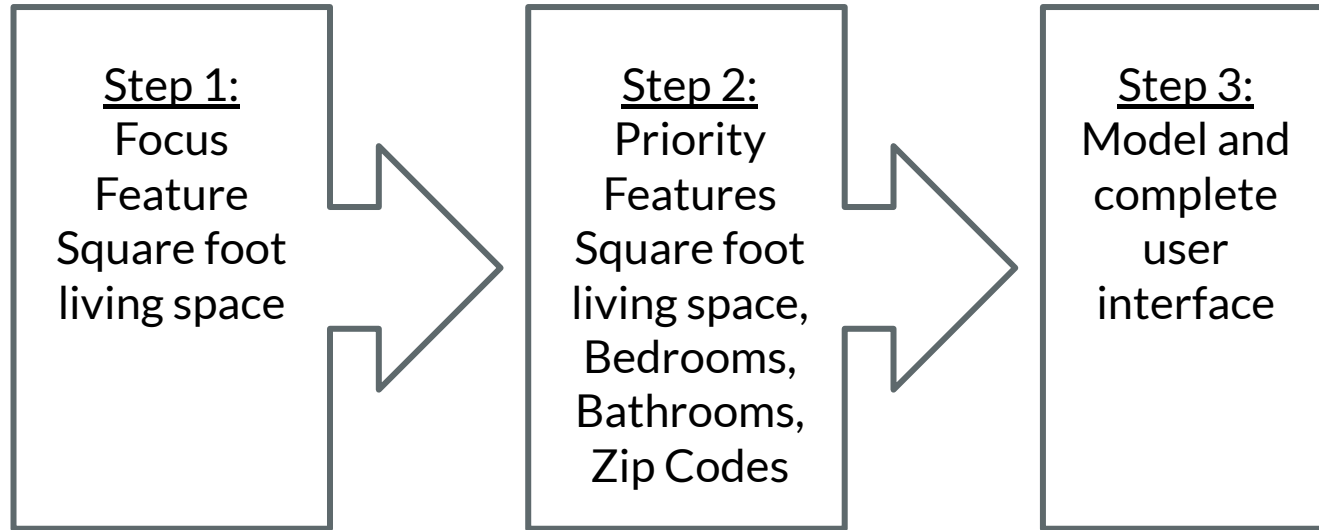

Correlations

Our Objective is to predict home 'price'.

Square footage is the strongest predictor of price.

Modeling Process

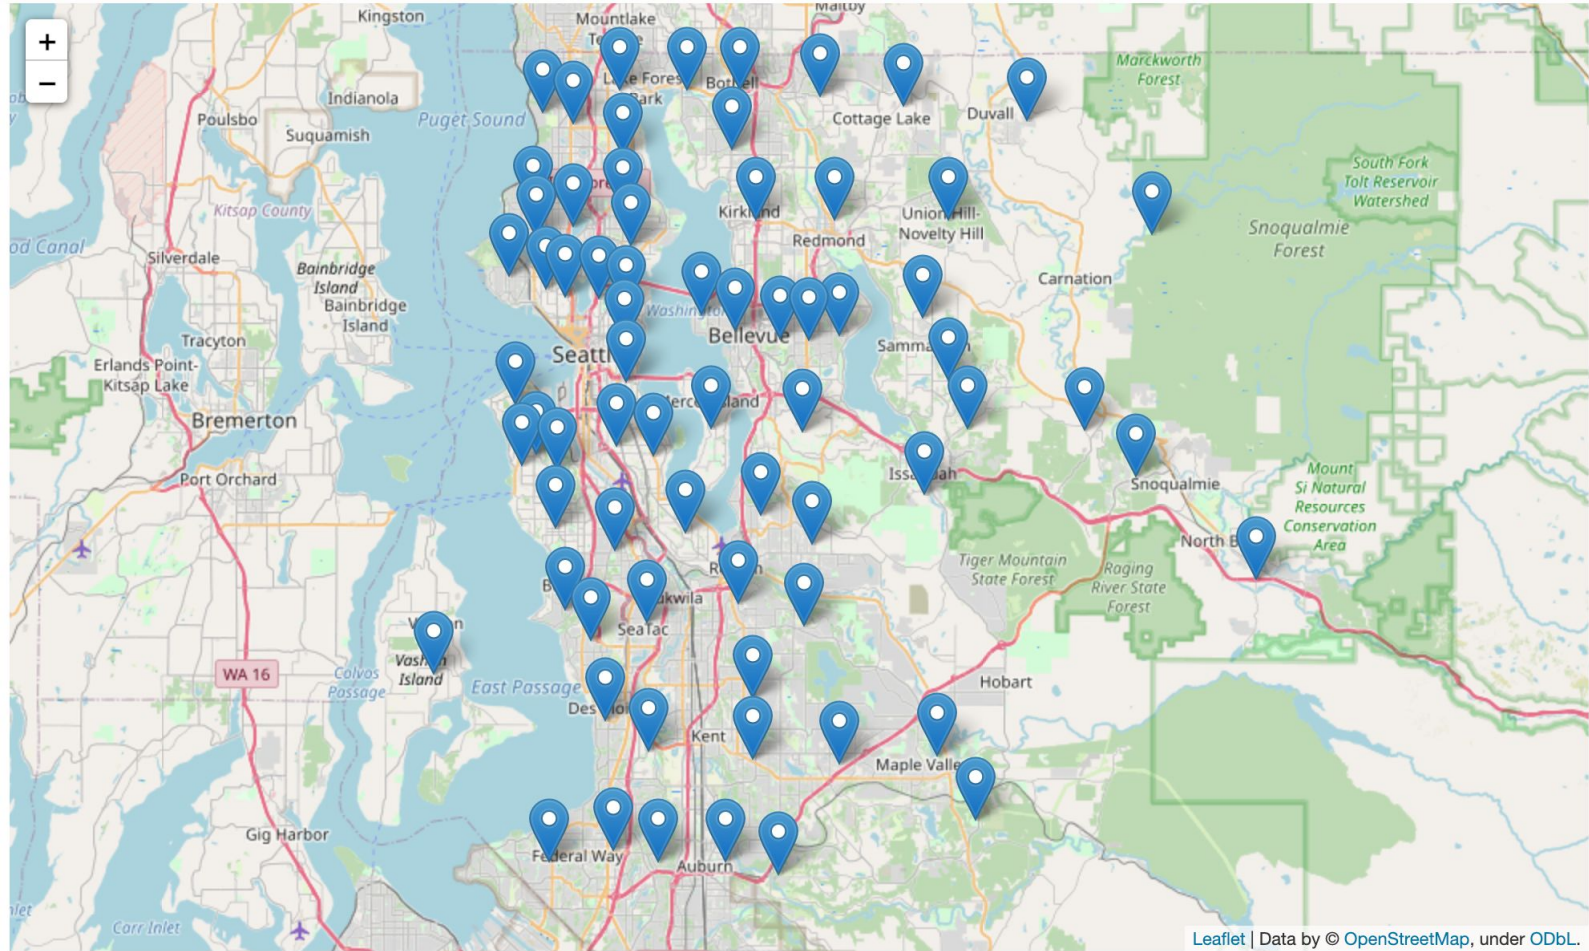

Visuals

```
price_predictor()
```

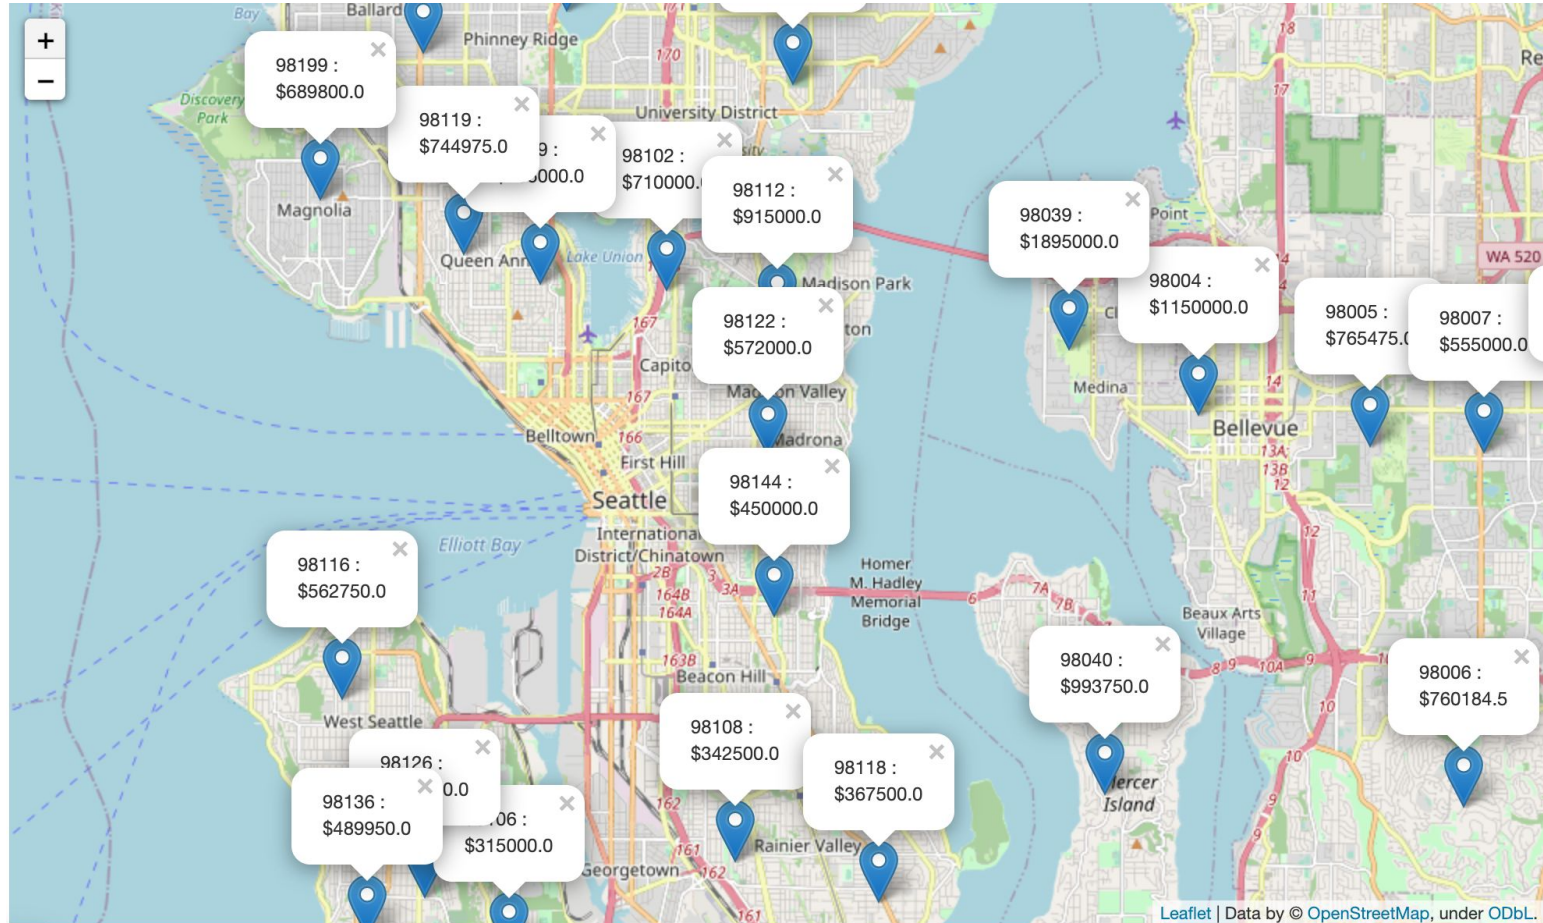

How many bedrooms? |

Simple user input fields allow quick predictions of home value to be produced based on key metrics.

Interactive Map of Median Home Prices in King County, WA by Zip Code

Interactive Map of Median Home Prices in King County, WA by Zip Code (zoomed in with flags showing)

Location, Location, Location!

Zip code value is extremely variable:

- For example:
 - Zip Code 98039 = +\$1,335,000
 - Zip Code 98059 = - \$1962

~ +\$275 per square foot living space

~ +\$10,275 for each additional bathroom

~ -\$47,700 for bedrooms

Model Accuracy/Precision

Model Training is precise.

- ❑ It performs consistently
- ❑ Normal distribution
- ❑ Predictions generally are in range of observed values

*Blue Dotted Line = Actual Value

Future Analysis

While the model performs well at and above the median of overall home sales, we see a decline in accuracy on lower priced homes.

To be used with discretion.

Future Analysis – Cont.

Future Analysis would be centered around refining this model to:

- ☐ Reduce error
- ☐ Incorporate additional zip codes in King County
- ☐ Improve impact of bedrooms

Appendix

What if I do not know the zip code. Will the predictor still work?

-The predictor tool does require a zip code to predict a price.

Would this work in my town of Puyallup?

-This tool works only for towns falling in King County zip codes present in our data set. Expansion to other counties and zip codes would be open to exploration in future analysis.
